

FOR IMMEDIATE RELEASE:

STOP BEING SUED FOR STUCCO INSTALLATIONS!

The Stucco Institute of Florida has two distinctive CE course options designed to ensure the integrity of your exterior stucco product in all climate conditions.

Have you ever noticed that historically the ASTM C-926 and C-1063 codes haven't been directly applicable (or best suited) to Florida construction due to Florida's unique climate conditions? The Stucco Institute did and we have the learning solutions to protect the quality of your workmanship, no matter what specific requirements the project may call for.

The Stucco Institute has two distinctive CE course options to fit your needs. The Stucco Institute recognizes the importance of traditional stucco education—but isn't that the same education you've already been getting? If you're following ASTM provisions and still being sued for improper stucco installations in Florida climate conditions, then **it's time you looked into the Sealed Stucco System.**

The Sealed Stucco System is a regionally adapted stucco procedure built on 40 years of time-honored and complication-free service life. While still using common stucco materials and the standard 5/8" thickness, the Sealed Stucco System differs from traditional stucco systems by eliminating problematic control joints and the additional "bond-break" layer. The resulting exterior stucco product is attractive, dependable and, most importantly, code-approved. The 2-day Sealed Stucco System Technician training course makes its debut July 30-31, 2016. Visit <http://sealedstuccosystem.com> for details.

For contractors and builders who seek a more traditional educational approach, the Stucco Institute has got you covered. In our traditional stucco course students learn proper installation of the ASTM C-926 and C-1063 Stucco and Lath codes, as well as the methods that will help the contractor avoid potential litigation issues. The next class takes place August 28, 2016.

Both courses are approved for 7 hours of Florida CE credit. All industry professionals seeking certification in the Sealed Stucco System or other up-to-date stucco education options are encouraged to visit <http://stuccoinstitute.com> to learn more. Classes start soon, so sign up today!
